# INTRODUCTION

This report summarizes 1969 traffic volumes and vehicle miles of travel on rural sections of the Interstate, Primary and Secondary Federal Aid Systems. Average daily traffic volumes on the Interstate and Primary systems are further classified into out-of-state passenger cars and commercial vehicles. Comparisons are made with traffic volumes for the years 1941, 1951, 1961, 1968 and 1969 for each section of the Interstate and Primary systems. Pickups and light delivery trucks were classified as commercial vehicles in years previous to 1954. Since 1954, these light units have been included with passenger cars in order to show a more realistic picture of travel by the heavier commercial vehicles.

Some of the more important comparisons of travel on Montana's Federal Aid Systems are shown in the following tabulations.

Travel by out-of-state passenger cars on the combined Interstate and Primary Systems increased by about 3.2% from 1968 to 1969. Commercial vehicle volumes decreased 1.2% on the combined Interstate and Primary Systems from 1968 to 1969. The Interstate System showed a decrease of 3.0% in commercial travel while the Primary System decreased 0.2% from 1968 to 1969.

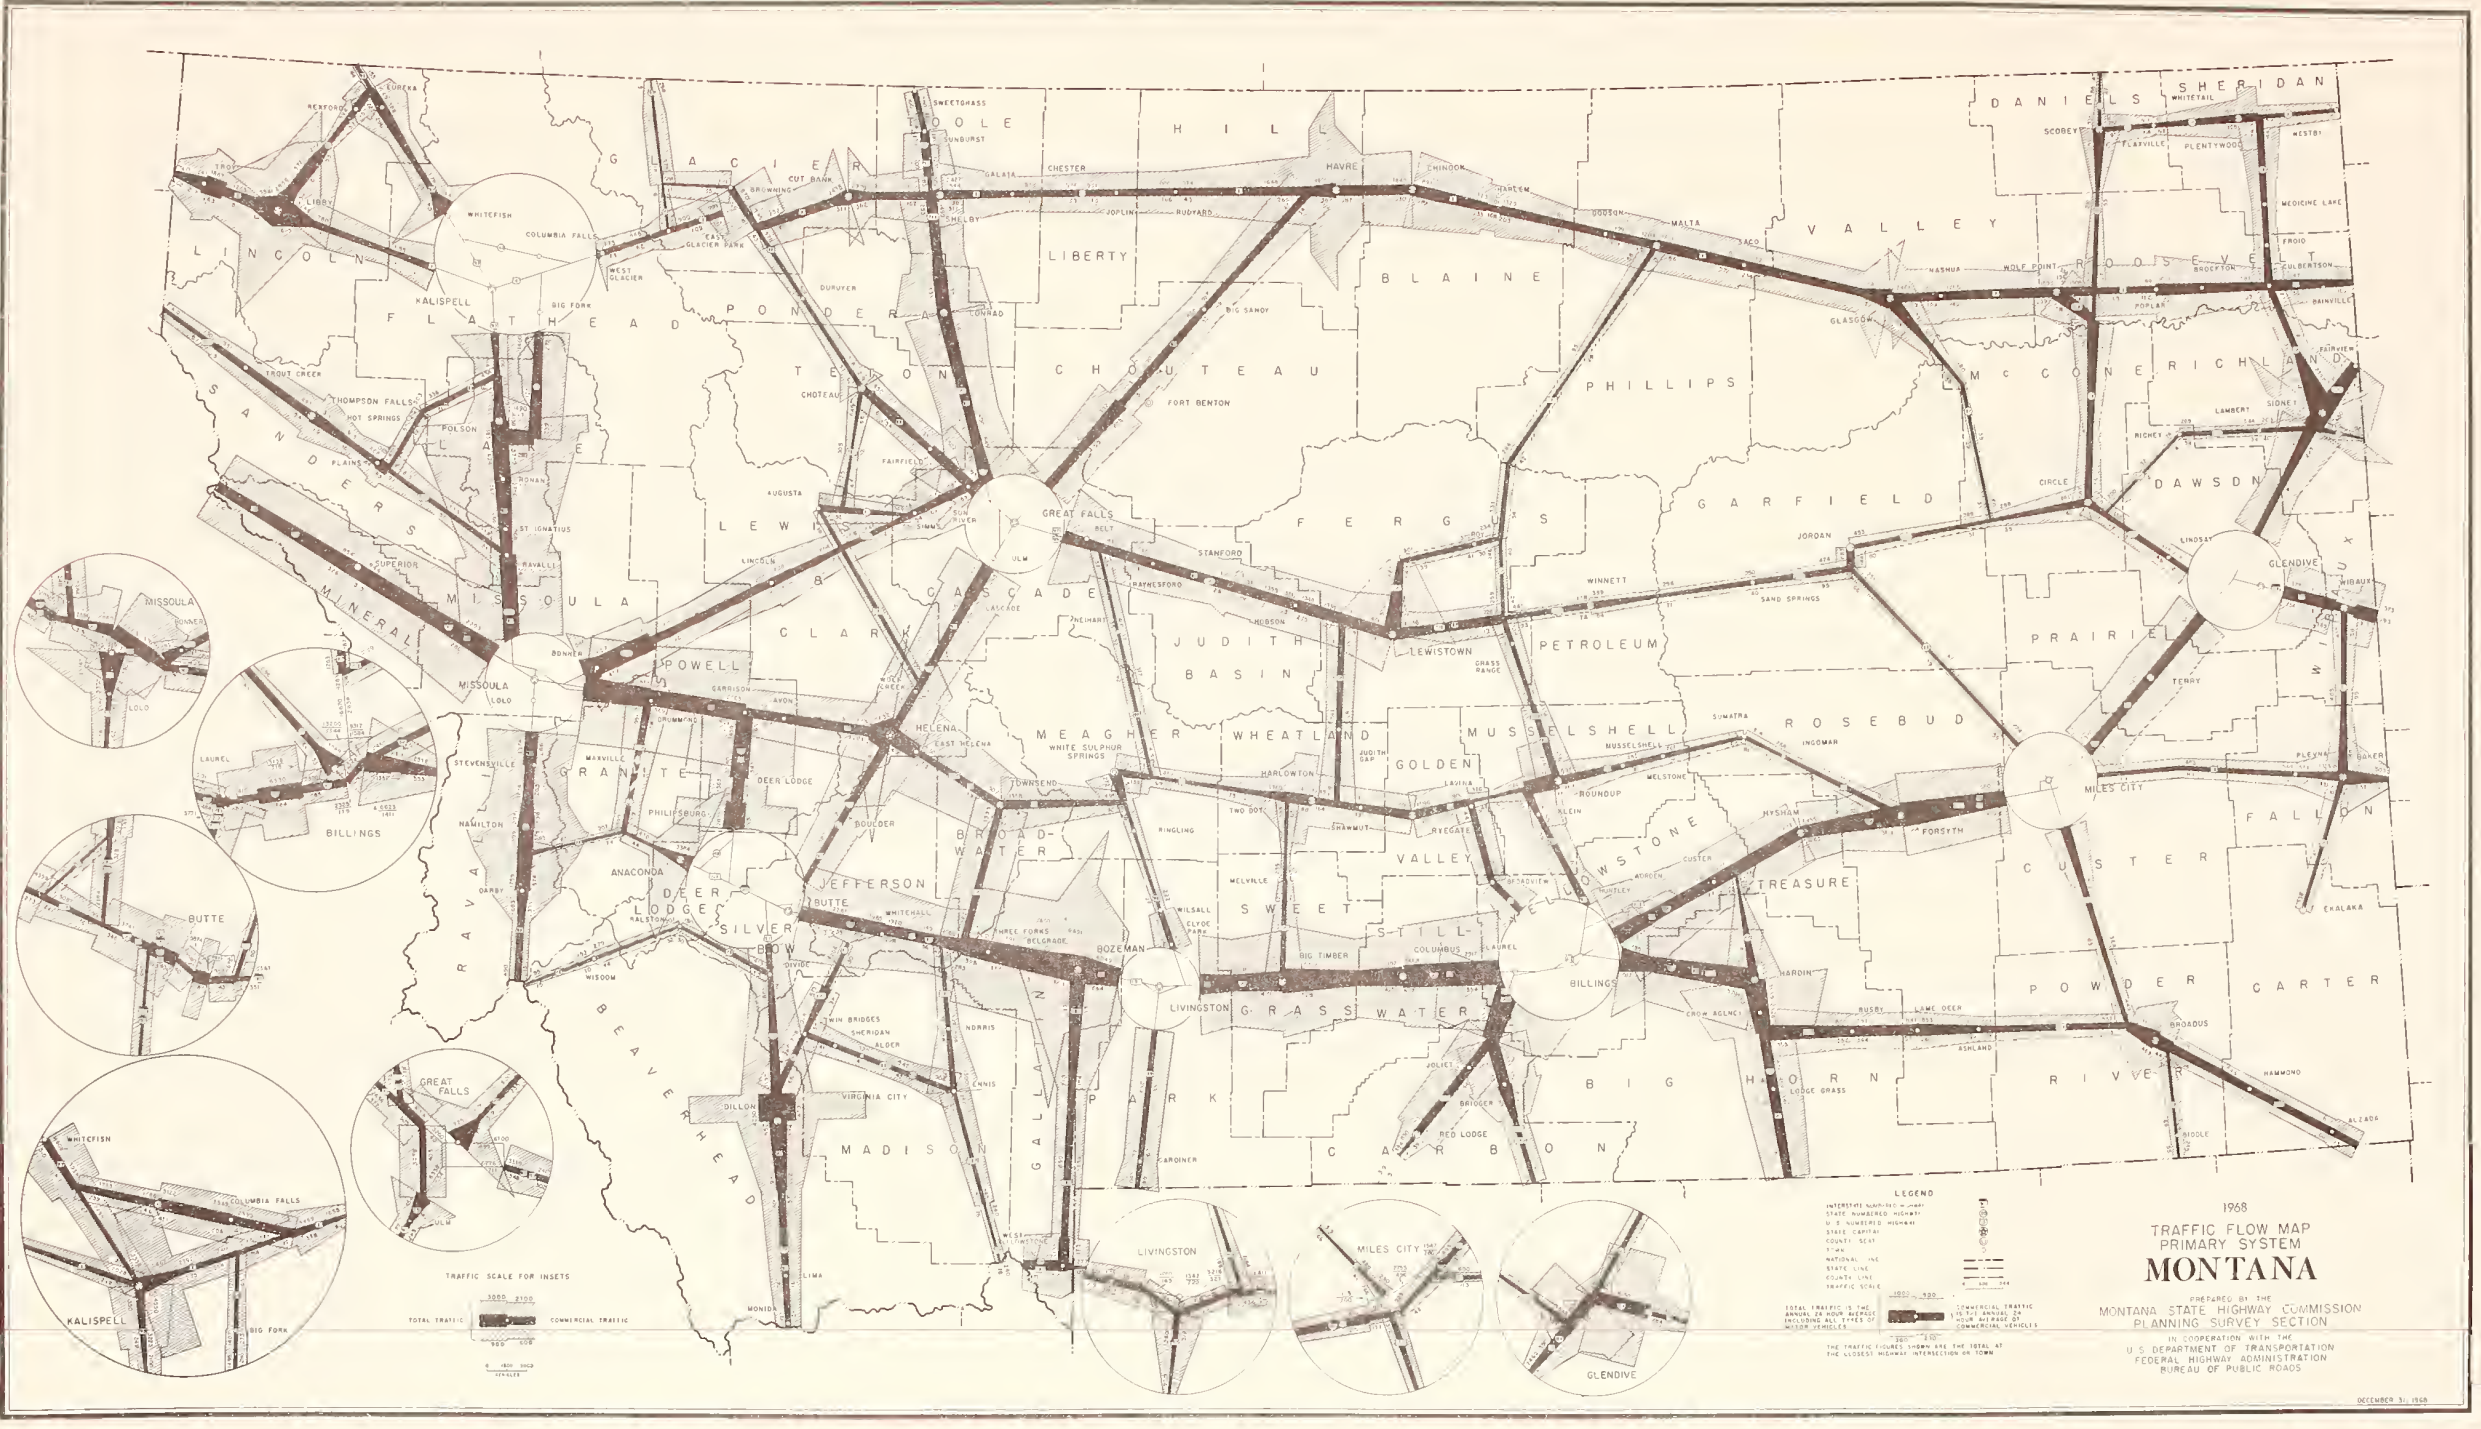

The Interstate System, which consists of about 20% of the total Primary mileage, carried 37% of the total traffic, 36% of the commercial trucks, and 51% of the out-of-state passenger cars that traveled on the Interstate and Primary Systems during 1969.
